CLASS – ASSIGNMENT

1. Write a program to read a file and count how many vowels are present in its content

```
# initial count
count = 0
# open the file
with open("File.txt", "r") as file:
    content = file.read() # read files
    print(content)

    for ch in content.lower(): # convert uppercase to lower case
        if ch in "aeiou":  # check conditions
            count += 1

print("Total vowels:", count)
```

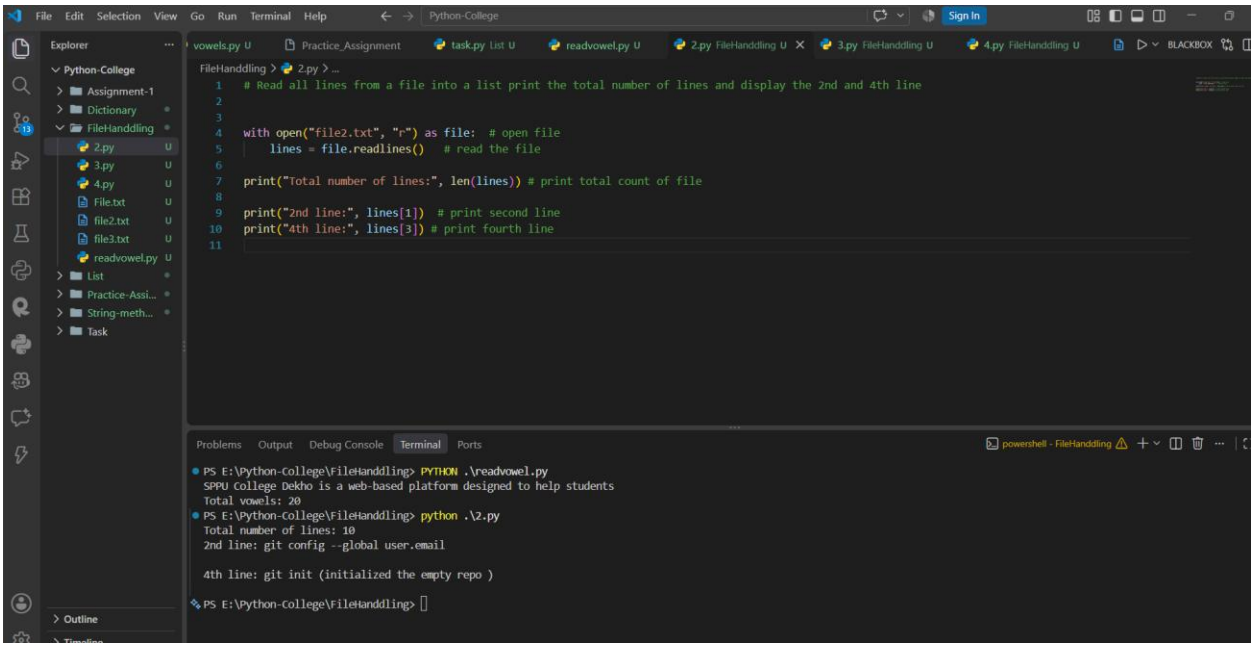

2. Read all lines from a file into a list print the total number of lines and display the 2nd and 4th line

```
with open("file2.txt", "r") as file:  # open file
    lines = file.readlines()   # read the file

print("Total number of lines:", len(lines)) # print total count of file

print("2nd line:", lines[1])  # print second line
print("4th line:", lines[3]) # print fourth line
```

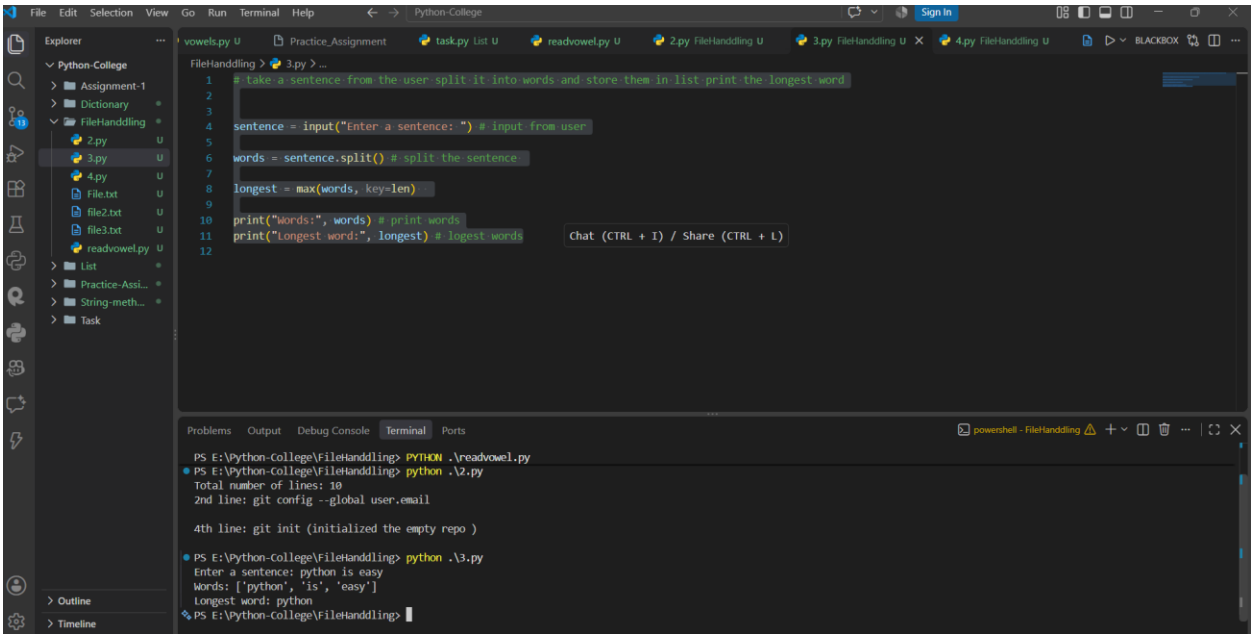

```
# take a sentence from the user split it into words and store them in list print the longest word

sentence = input("Enter a sentence: ") # input from user

words = sentence.split() # split the sentence

longest = max(words, key=len)

print("Words:", words) # print words
print("Longest word:", longest) # logest words
```

4. read a file, split its content into words and store them in a list

```
# 1 print the total number of words
# 2 print all unique words

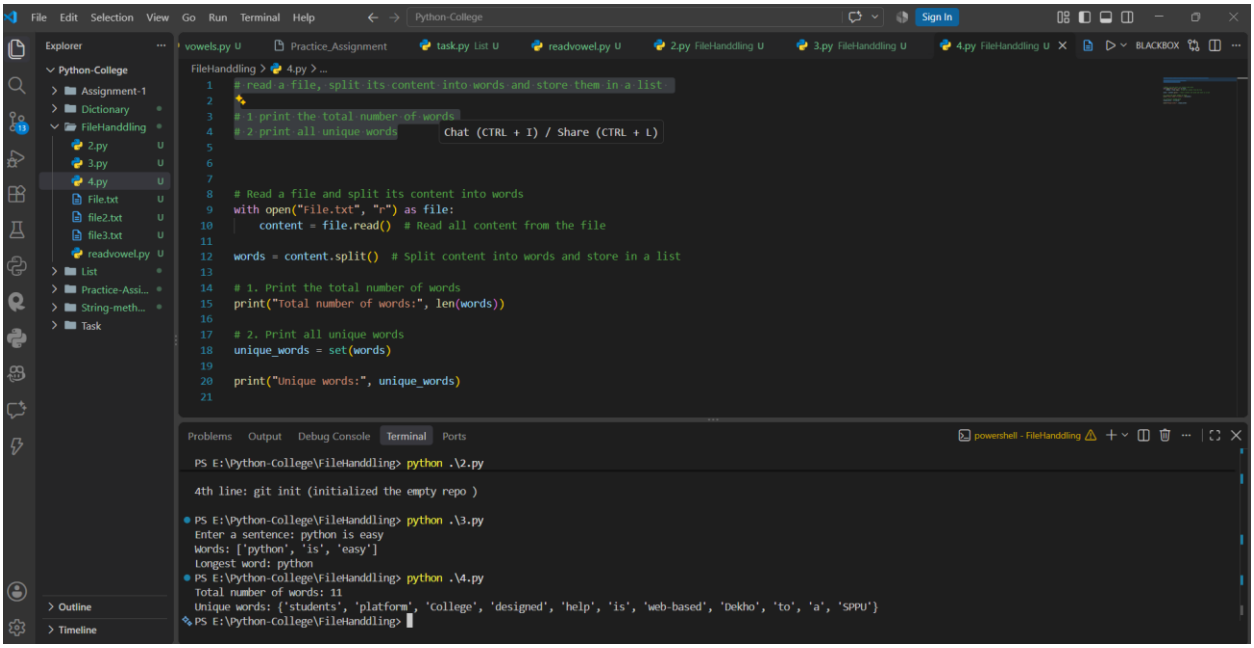

# Read a file and split its content into words
with open("File.txt", "r") as file:
    content = file.read()  # Read all content from the file

words = content.split()  # Split content into words and store in a list

# 1. Print the total number of words
print("Total number of words:", len(words))

# 2. Print all unique words
unique_words = set(words)

print("Unique words:", unique_words)
```
